

Vatsal Chandrani

B.Tech – Information Technology

Backend Software Engineer focused on scalable distributed systems using Java, Spring Boot and PostgreSQL. Passionate about designing secure REST APIs, database architecture, caching strategies and high-performance backend systems.

EDUCATION

Dharmsinh Desai University

CPI: 8.38

2023 - 2027

Nadiad, Gujarat

TECHNICAL SKILLS

Programming Languages: Java, C, C++, JavaScript

Web Stack: Spring Boot, Spring Security, Node.js, Express.js, REST APIs, React

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Messaging: Docker, Kubernetes, Apache Kafka

Developer Tools: Git, GitHub, Postman, VS Code, IntelliJ IDEA

CS Fundamentals: Data Structures & Algorithms, OOP, Operating Systems, Database Design, System Design Concepts

PROJECTS

CampusConnect – Multi-College Student Engagement Platform | *Spring Boot, React, PostgreSQL, Redis*

🔗 Live 🔄

- Recognized fragmented campus communication across WhatsApp, emails, Google Forms, and isolated portals, leading to poor information discovery and low student engagement.
- Built a scalable multi-college communication platform, centralizing **clubs, announcements, events, digital newspapers, research paper publishing, one-click event registration, role-based approvals**, and cross-campus content sharing.
- Integrated **50+ REST APIs, Spring Security-based authentication, 6-role authorization, modular architecture, Redis caching**, and a **PostgreSQL-backed relational data model** for scalable and secure operations.

BidVault – Real-Time Online Auction Platform | *Node.js, Express.js, React, Socket.IO, MongoDB, Redis*

🔗 Live 🔄

- Engineered a **full-stack online auction system** with **real-time bidding** using **Socket.IO**, supporting **live leaderboard updates**.
- Developed an **automatic bidding engine** and implemented **Redis-based distributed locking** to prevent **race conditions** during **concurrent bid placement**.
- Orchestrated the complete **auction lifecycle**, including **JWT-based authentication**, media uploads via **Cloudinary**, auction scheduling, and participation workflows.

CityStore – City-Wide Business Discovery Platform | *Database Design, PostgreSQL*

🔄

- Designed a scalable database for a **city-wide business discovery platform** supporting retail stores, service providers, restaurants, and hybrid businesses through a **modular relational data model**.
- Modeled a **scalable PostgreSQL schema** with **30+ normalized entities** supporting business onboarding, subscriptions, product management, and **location-aware search**.

Early Anomaly Detection – Financial Monitoring System | *Spring Boot, Python, Kafka, Postgres, MLflow, Docker*

🔄

- Implemented an **asynchronous event-driven pipeline** using **Spring Boot** and **Apache Kafka** to ingest transaction streams from Account Aggregator webhooks, handling **10,000+ events/sec**.
- Developed a Python feature engineering engine utilizing **NumPy** and **Pandas** to compute real-time distress metrics (Debt-to-Income, AMB drop (%)), which powers an **Isolation Forest anomaly model**.
- Established MLOps workflows** with **MLflow** for data drift tracking and automated model retraining triggers; containerized microservices with **Docker Compose**.

An Interactive IDE-Style Portfolio | **Live** - 🌐 vatsal-chandrani.me

🔄

POSITION OF RESPONSIBILITY

Founder & Lead

2025 – 2026

Programming Club

- Founded and led the Programming Club, fostering a coding culture through contests and collaborative learning.
- Successfully organized 5 competitive programming events and led post-contest problem-solving sessions.

ACHIEVEMENTS

- Solved **950+** DSA and competitive programming problems. Profile: 🔗 vatsalchandrani
- Reached **1271 rating (Pupil)** on Codeforces and solved **300+ problems**. Profile: 🔗 vasuchandrani
- Achieved **1650+ rating (top 17%)** on LeetCode and solved **400+ problems**. Profile: 🔗 vasuchandrani
